

**Corporation obtaining approval, the name of its representative, and the address of its main office**

National Institute of Agrobiological Sciences  
Mitsuo Ishige, President  
2-1-2 Kannondai, Tsukuba, Ibaraki

**Approved Type 1 Use Regulation**

Name of the type of Living Modified Organism:	Rice containing seven linked major human T-cell epitopes peptide derived from Japanese Cedar pollen allergens ( <i>7Crp</i> , <i>Oryza sativa</i> L.) ( <i>7Crp</i> #10)
Content of the Type 1 Use of Living Modified Organism:	Cultivation in isolated field, storage, transportation, disposal, and acts incidental to them
Method of the Type 1 Use of Living Modified Organism:	<p>Location: 2-1-2 Kannondai, Tsukuba, Ibaraki 305-8602, Japan</p> <p>Name: Isolated field, Field, National Institute of Agrobiological Sciences</p> <p>Period of evaluation: From May 25, 2005 to December 31, 2007</p> <p>1. Facilities of the isolated field</p> <p>(1) Security fence around the circumference of the isolated field to prevent unauthorized entry.</p> <p>(2) Prominent notice board that is easy to find, indicating the area is an isolated field and is forbiddance of unauthorized entry, also indicating the name of the administrator.</p> <p>(3) Washing area to wash out living modified organisms from machinery, equipment, and footwear used in the area. Install sedimentation tank and nets in a drainage system to prevent unexpected flowing out of extraneous recombinant rice.</p> <p>(4) Net to protect recombinant rice from wild animals will be installed around the circumference of the cultivation area before heading time.</p>

2. Operation procedures in the isolated field

- (1) Suppress the growth of plants other than recombinant rice and the control rice to the lowest level.
- (2) Prevent unexpected spillage of recombinant rice in transit and storage by using secure container.
- (3) Inactivate recombinant rice after cultivation by plowing back in the isolated field or other methods, except transit and storage of the recombinant rice outside the isolated field in compliance with paragraph (2).
- (4) Prevent unexpected outspread of extraneous recombinant rice to machinery, equipment, and footwear used in the area by washing out in the isolated field.
- (5) Maintain and manage the facility so that it can adequately function.
- (6) Ensure personnel compliance with paragraphs (1) through (5) when implementing Type I Use.
- (7) When risk of an adverse effect on biological diversity is detected, ensure implementation of stipulated “emergency measures plan”.
